Location: LATAM | Open to Remote Opportunities

PROFESSIONAL SUMMARY

Senior SDET / QA Automation Engineer with 7+ years of experience building scalable test automation solutions for microservices, backend systems, and distributed architectures. Strong hybrid profile combining QA automation, API testing, backend development, CI/CD, and cloud exposure.

Experienced in Java, RestAssured, Selenium, Playwright, Postman/Newman, Node.js, TypeScript, SQL, Jenkins, GitHub Actions, and AWS. Skilled in building and modernizing API regression frameworks, improving maintainability, reporting, CI execution, and failure triage across multiple environments.

Hands-on experience contributing to backend services using Node.js and Spring Boot, validating distributed systems, improving automation strategy, and leveraging AI-assisted development tools to accelerate testing, documentation, framework migration, and engineering productivity.

TECHNICAL SKILLS

- **Languages:** Java, TypeScript, JavaScript, Node.js, Python, SQL
- **Test Automation:** RestAssured, Selenium, Playwright, Cucumber, JUnit, Postman/Newman, Allure
- **API & Backend Testing:** REST APIs, Microservices, Integration, Regression, Smoke, E2E
- **Backend Development:** Node.js, Express, Java, Spring Boot
- **Cloud & DevOps:** AWS, Lambda, SQS, SSM, CloudWatch, CloudFormation, ECS, RDS, Jenkins, GitHub Actions
- **Performance & Observability:** JMeter, CloudWatch, logs, dashboards, root-cause analysis
- **AI-assisted Engineering:** ChatGPT, Claude Code, OpenAI Codex

PROFESSIONAL EXPERIENCE

QA Automation Engineer / Software Developer | IncludIT (2022 - Present)

- Drove the modernization of API regression testing by migrating Postman/Newman suites into a Java + RestAssured framework across multiple microservices, including some of the largest regression suites.
- Enabled automated daily regression runs and manual executions across SIT, STG, and PROD through CI/CD pipelines.
- Improved maintainability by replacing JSON-based Postman collections with typed Java code, reusable API clients, shared configuration, structured assertions, and better environment handling.
- Improved Allure reporting to provide clearer debugging visibility with request/response evidence, execution details, and failure analysis.
- Designed and maintained automated API and UI test suites using Java, RestAssured, Postman/Newman, Selenium, Playwright, JavaScript, and TypeScript.
- Developed backend services using Node.js, Express, Java, and Spring Boot, including bug fixes, feature enhancements, API updates, and service improvements.
- Configured and optimized CI/CD pipelines using Jenkins and GitHub Actions for regression execution, reporting, and environment-based workflows.
- Performed AWS maintenance and upgrades involving Lambda, runtime updates, CloudFormation, SSM parameters, CloudWatch, and service configuration.
- Conducted JMeter performance tests to evaluate scalability, reliability, and recovery behavior under load.
- Monitored system health through CloudWatch, logs, dashboards, and observability tools, supporting root-cause analysis and production-like debugging.
- Leveraged AI-assisted engineering tools such as Claude Code, OpenAI Codex, and ChatGPT for test generation, framework development, codebase analysis, troubleshooting, documentation, refactoring, and automation acceleration.
- Collaborated with QA engineers and developers to promote automation adoption, framework usage, and testing best practices across teams.

QA Automation Engineer | Cognizant (2021 - 2022)

- Developed and maintained automation testing scripts using Python, Selenium, and pytest.
- Worked with Azure Repos, Azure Pipelines, and Test Plans to support CI/CD processes and automated test execution.
- Performed API and integration testing across microservices using Postman.
- Collaborated with QA engineers and developers to improve automation adoption and testing practices.

QA Automation Engineer | Globant (2020 - 2021)

- Conducted automated quality testing for iOS and Android applications.
- Developed automation scripts using Java, Appium, Maven, TestNG, and Cucumber following the Page Object Model (POM) design pattern.
- Executed Smoke, Sanity, and Regression test suites integrated with Jenkins and Git workflows.
- Collaborated with cross-functional Agile teams to improve mobile application quality and release confidence.

QA Analyst | Vates (2019 - 2020)

- Designed and executed test cases for web applications covering frontend and backend components.
- Performed exploratory, functional, regression, and end-to-end testing using structured test design techniques.
- Worked with PL/SQL, database validation, and Jira in a semi-agile development environment.

PROJECTS

- **Personal Expense Tracker:** Backend microservices application using Node.js and PostgreSQL. • Includes REST APIs, analytics, multi-currency expense tracking, and deployment on a VPS.

EDUCATION & CERTIFICATIONS • Technical Degree in Programming - UTN

- AWS Certified Cloud Practitioner
- ISTQB Certified Tester Foundation Level
